## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

Art Unit: 1761

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dunn et al (U.S. Patent No. 5,614,243) in view of Asher et al (U.S. Patent 5215777).

Dunn et al disclose a starch based texturizing agent and process for preparing comprising a combination of 1 to 30% starch (e.g. corn starch), 2 to about 10% gums (i.e. xanthan gum, gum arabic, carrageenan, locust bean gum, guar gum and combinations thereof), and whey protein, where the starch is heated prior to mixing (see entire document, especially claims 1-3, 5, 9, 10, and 25). Dunn et al also teach the use of the texturizing agent in low fat and fat-free foods, including dairy products such as yogurt and cheese (see abstract).

The claims differ as to the specific use of whey protein concentrate.

Asher et al disclose a texturizing agent, for use in low or non fat ice cream, and process of preparing comprising heating of the mixture and the use of about 5 to about 15% whey protein concentrate (see entire document).

It would have been obvious to a person of ordinary skill in the art, at the time the invention was made, to use whey protein concentrate as taught by Asher et al in that of Dunn et al because whey protein concentrate is a conventional source of whey protein.

In the absence of unexpected results, it is not seen how the claimed invention differs from the teachings of the prior art. Applicant's claims are drawn to a combination of known components which produces expected results, see *In re Kerkhoven* 205 USPQ 1069 and *In re Gershon* 152 USPQ 602.

All of the claim limitations have been considered. None of them are seen as serving as basis for patentability.

No claim is allowed.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Tang (U.S. Patent No. 5589215) discloses a fat mimetic system comprising starch, protein, and gum (see entire patent).

Whaley et al (WO 99/57996) disclose hydrocolloid composition comprising starch, a gum, and protein (see entire document).
